

Adhesive instructions for Container Ident System labels

Labels for residual and organic waste bins

You will receive two labels per bin for your residual and organic waste bins. You can assign the labels to your containers using the printed designations "R residual waste" or "B organic waste" and the size information for the containers.

Residual and organic waste bins must be labelled on the **right and left side** of the bin **respectively**. For this purpose, you will receive two identical labels per container, which are stuck together on a backing film.

Cleaning the bonding area

Before you apply the labels, please clean the adhesive areas on the container so that they are dry and free of dust and grease.

Please pay attention to the correct position of the labels

Please remove the backing film and stick the labels to the positions indicated below.

The labels cannot be removed without damage once they have been affixed. They can only be used once.

The correct adhesive position for the **normal waste bin with two wheels** is about 8 cm below the edge of the bin and about 5 cm from the front edge on the right and left side.

See highlighted area.

For **larger four-wheel containers (large containers)** with handle, the correct position is on the right and left side directly under the handle.
